

IMPORTANT NOTICE

PRODUCT WARNING ON MARINCO ADAPTER, CAT. NO. 104A,

SKU No. 194423

Please be advised that a quality defect has been found in a number of MARINCO 104A adapters SKU No. 194423. These adapters have been wired incorrectly so that the line, or hot, blade of the plug is connected to the ground contact in the connector. These products were made between August 2009 and April 12, 2010.

If an incorrectly wired adapter is used, it will not provide power through the line contacts of the connector so it will appear to not work. *However, the power will be on the grounding contact, which can **energize any exposed metal and create a condition that could shock or electrocute the user, potentially resulting in serious bodily injury or death, and also potentially resulting in fire or other property damage.***

It is very important that any adapters be returned to MarincO which will provide new replacement adapters at no charge. West Marine and MarincO regret any inconvenience this causes, but we know that you understand that we are acting in the interest of our customers' safety.

For instructions on how to receive replacement adapters, contact Mr. Mark Thomson at MarincO at 1-414-247-5578. Please do not bring the product back to the West Marine store as MarincO is prepared to ship replacement product directly.
